

**PFAFF**<sup>®</sup> Industrial

**Simple**  **Innovative**

The new  
**8303i**  
Innovations become standard

Upgrade of the market leader! Hot-air taping machine from PFAFF INDUSTRIAL for welding continuous seams on water-resistant, waterproof and breathable materials with new technical features:

### **Reproducible quality / High process reliability**

All relevant process parameters can be programmed and saved via touchscreen

### **Differential feed for highest seam quality**

Two separate drive motors for the top and bottom feed roller guarantee an optimum adaptation to the operation (e.g. smooth seams or fullness for formed parts).

### **Tape cutter with separate drive**

Trimming of the seam tape becomes unnecessary (welding from the beginning of the tape), resulting in a considerable reduction of the tape used. The tape cutter is electronically controlled, with precision adjustment for an exact setting.

### **Maximum Output - Less material usage**

20% increased productivity in comparison to other tape welding machines. Up to 15% reduction of the amount of tape used compared to standard machines

### **Variable post- and roller concept**

Customer application in focus! Variable post concept (post width 25, 28 and 32 mm and post positions like post from front, vertical post and post from back – depending on the operation). Several roller diameters are available: 45 mm for standard operations, 25 mm for shoes and automotive (narrow curves) applications.
